The KLEAR CHEM™ Advantage

The Recovered Solution

The recovered cleaning solution is free of gross soil, has no suspended solids and has minimal water hardness. The recovered cleaning solution works as well as a new solution and may be reused for many days. The soil remains in the small volume of membrane concentrate which is much easier to handle or dispose off than is the full volume of dirty cleaning solution. A major portion of the chemicals used in cleaning are recovered in the clarified permeate.

✓ **A cleaning solution which may be reused day after day.**

- ✓ Provides savings on cleaning chemicals.
- ✓ Saves on water and recovers the solution at use temperature.
- ✓ Recovers majority of cleaning chemicals

CFR can design, fabricate, and install your membrane filtration process. CFR also provides controls, programming, full start up assistance, and training. You can rely on CFR to stand behind every system that we put in. Even more, you can rely on CFR to provide full after-start up service and support if problems occur or if system modification or expansion is desired..

The KLEAR CHEM™ Advantage

REDUCES COD LEVELS IN RECOVERED CLEANING SOLUTIONS

The Klear Chem™ microfiltered reclaimed caustic solutions consistently show excellent rejections of COD. The dirtier the solution, the better the Klear Chem™ microfilter is at removing COD. This clearly shows that the recovered caustic from Klear Chem™ microfilter is of excellent quality and this permits one to reuse the recovered caustic for many days.

RECOVERED CIP SOLUTIONS

- Reduces chemical costs*
- Reduces the load on the treatment plant*
- Reduces treatment and discharge costs*
- Reduces water charges*
- Reduces water treatment costs*
- Reduces heating and cooling costs*
- Reduces chemical inventories*
