SYSTEM COMPONENTS & ACCESSORIES

SYSTEM COMPONENTS

CFR manufactures system components in its modern 50,000 sq. foot fabrication facility. Our fabrication facility has dedicated engineers and a highly experienced staff of fabrication specialists familiar with fabrication standards such as 3A, ASME or CE markings. Our components and parts are the same components and parts that we use in the equipment that we fabricate; we use them because we can't find better parts and so should you.

CFR can design, fabricate, and install your membrane filtration process. CFR also provides controls, programming, full start up assistance, and training. You can rely on CFR to stand behind every system that we put in. Even more, you can rely on CFR to provide full after-start up service and support if problems occur or if system modification or expansion is desired..

SYSTEM COMPONENTS & ACCESSORIES

Anti Telescoping Devices (ATD's)

Critical process applications in food, pharmaceutical and bioprocessing require both sanitary construction and durability. CFR ATD's in either stainless steel or clear polysulfone provide sanitary connections which meet the need for cleanliness and durability required by these industries.

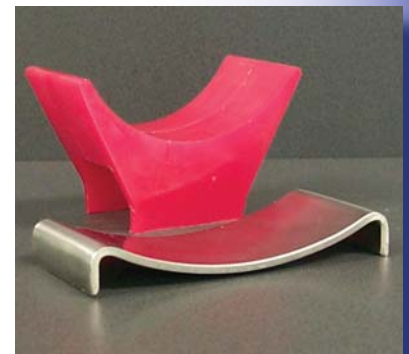

Vessel Closures with Permeate Ports

CFR manufactures all styles of vessel end closures both permeating and non-permeating. Permeate ports are available with sanitary style Tri-Clover type connections or in other desired configurations. Parts may be of either 304 or 316 construction. Other materials of construction are available for special applications.

Flow Meters

CFR has a full range of flow meters available with a full range of connections.

Mounts & Gaskets

CFR carries a full range of vessel saddles and mounts.
